

CASE STUDY:

Worked with a Systems Integrator and their Customer to properly secure their assortment of Data Racks

THE CHALLENGE(S):

- Required to integrate with the existing Access Control System
- Solution needed to be used in a variety of manufacturers Data Racks
- Required to have manual key override
- Required monitoring status of the doors

THE SOLUTION:

- The manual latching system, electronic locking capabilities and remote monitoring made the 3525 Electronic Rack Handle the ideal solution

BENEFITS of SOLUTION IMPLEMENTED:

- The 3525 electronic rack handle provided a quick retrofit of the existing mechanical handles keeping the same look and operation
- The 12VDC operation of the rack handle allowed for simple integration with the Customers current access system
- The built in monitoring status switches provided all the necessary alarm outputs for the Customer
- The built in Key override on the 3525 rack handle provided the necessary back up required for opening in an emergency
