

THE APPLICATION:

Worked with an outfitter of Police Tactical Squad Vehicles to ensure that weapon containers remained secure while stationary and during transit.

THE CHALLENGE(S):

- Wanted a standard lock that was easily retrofitted into the existing storage containers
- Solution needed to operate using the existing 12VDC vehicle battery
- The locks were required to remain secured when power was removed
- Simple operation with the ability to unlock on demand

THE SOLUTION:

- 3513 cabinet lock was selected for its size, strength and ability to fit within the existing containers, while the 9322 prox reader was chosen for its ability to provide quick and easy access to the weapon containers

BENEFITS of SOLUTION IMPLEMENTED:

- Using two 3513 locks per storage container provided greater security and strength during transit
- Solution provided greater security and eliminated the risk of weapons being taken without authorization when squad vehicles were stationary.
